

SLF

OUR SIDELOADERS

ADVANTAGES

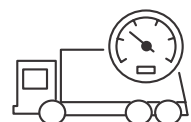

High payload due to efficient paddle compactor

Container pick-up via telescopic extension with clamp holder

High removal rate thanks to clamp holder with automatic operation

Noise-optimised due to low operating speed

ABOUT THE SLF

The body of this refuse collection vehicle is available with a volume of 18 m³ and 22 m³, the lifter is controlled by joystick: the driver can pick up 2-wheel bins from his cab using the extension arm in 1-man operation. This transports the waste into a hopper, from where it

is compressed very quietly by a pendulum compactor. Emptying takes place by tilting the body backwards by approx. 40 degrees. Ideal for rural regions and areas where waste bins are easily accessible.

SERIES OPTIONS

BASIC CONSTRUCTION:

- Suitable for two- & three-axle chassis
- Clamp holder for MGB EN 840-1

AREAS OF APPLICATION

**RURAL AREAS
WITH LOW
TO MEDIUM
CONTAINER
DENSITY**
