

MICRO HG

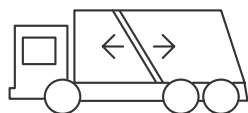

THE FUNCTIONAL ONE

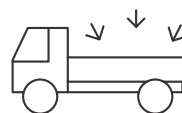

ADVANTAGES

Suitable for platform chassis from 5 tonnes

Drive of compaction plate by centrally mounted telescopic cylinder

Designed for multi equipment carrier with a narrow overall width

Variable body concept for heights, lengths & widths

ABOUT THE MICRO HG

This versatile refuse compaction body is the ideal addition to refuse collection bodies in the 2.5 to 6 m³ usable volume range. It is suitable, for example, for disposal in pedestrian zones, for green waste and for emptying waste bins. In the basic version,

the body can be filled manually from both sides via sliding loading doors. Alternatively, it can also be filled manually on the left and hydraulically on the right. The variable design of the body lengths, widths and heights makes the MICRO HG compatible with a wide

range of chassis technologies. Variable adjustment of the press stroke means it can be optimally adapted to the fraction to be disposed of.

SERIES OPTIONS

BASIC CONSTRUCTION:

- Optional double-sided loading through sliding doors
- Side-mounted lifter unit
- Lifter system with special container holder
- Space-optimised storage boxes

AREAS OF APPLICATION

**WASTE BIN
EMPTYING**

**CONTAINER
REMOVAL MGB
EN 840-1, 2, 3**
