

ROTARY 2418

THE VARIABLE ONE

ADVANTAGES

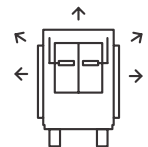

Split lifting comb

Rotary movement via rotating unit

Active container retention

Maximum loading width due to narrow lifter mounting frame

ABOUT THE ROTARY 2418

The split automatic lifter with two independently operating lifting/tilting units with bolted lifting comb extends across the entire width of the rear of the vehicle and can therefore be moved closer – this reduces the overhang and the load

in the body and on the axles is better distributed. A swivelling guide flap also enables open loading – ideal when bundles or sacks need to be transported. Ideal for: 1-man emptying of 2- and 4-wheel bins in residential and commercial areas.

SERIES OPTIONS

BASIC CONSTRUCTION:

- Suitable for different tailgate widths
- Preparation for weighting and RFID systems
- DIN hinged arm design
- Hydraulically folding guide flap
