

WASCHKOMBI

THE WASHING PRO

ADVANTAGES

Combination of washing
and collecting

No lid opening
MGB EN 840-1, 2, 3

All water-bearing
components are made
of stainless steel

Automatic cleaning of the
waste water tanks and
the collection body floor

ABOUT THE WASCHKOMBI

The combi-wash enables the collection of organic or residual waste and simultaneous cleaning of the containers in a single operation – with one vehicle and one vehicle crew. This makes it very economical to fulfil household requirements for hygienic bins. The bins are cleaned

fully automatically by two robot arms with washer jets rotating around two axes. The bin lids do not need to be opened manually before emptying, as the wash head opens the lid automatically. The inside of the lid is also rinsed during the washing process and

the dirty water tank and collection box are cleaned automatically using flat jet nozzles.

SERIES OPTIONS

BASIC CONSTRUCTION:

- Cold and hot water
- Spray-gun for manual post-cleaning
- Suitable for manual, automatic and special container lifter versions
