

DELTA PREMIUM 2316

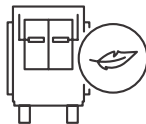

FOR FORWARD THINKERS

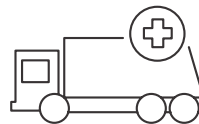

ADVANTAGES

Shortening of the rear overhang by removing the swing door

Weight optimisation in the overall system

Larger overall width

Fully hydraulic drive

ABOUT THE DELTA PREMIUM 2316

The split automatic lifter with two independently operating lifting/tipping units with lifting comb offers a weight advantage in combination with the vehicle, as the swivel hinged door weighing around 200 kilograms is no longer required. In addition, it extends across the

entire width of the rear of the vehicle and can therefore move closer – this reduces the overhang and achieves a better axles distribution. Areas of application: Ideal, for example, in conjunction with the MEDIUM X4 for narrow lanes in city centres.

SERIES OPTIONS

BASIC CONSTRUCTION:

- DIN hinged arm design
- Preparation for weighting and RFID systems
- Weight optimisation through plastic covers
- Automatic detection and changeover to four-wheel container
- Compatible with vehicle widths 2300 mm and 2500 mm

COMPLEMENTED BY SAFETY & ASSISTANCE SYSTEMS:

- Lateral working area protection device (safety barriers) available as internal and external variants
- Deep Scan
- Worker Protection System
