

MEGA 456

EMPTIES WASTE CONTAINERS FROM SMALL TO LARGE

Further
information

ABOUT THE MEGA 456

The automatic lifter is characterised as the fastest of the MEGA models in terms of performance discharge: It has two separate pick-up units for automatic MGB and manual large container emptying: a MGB swinging arm with one-piece or split lifting comb and integrated folding arms as well as a large container swinging arm for spigot containers with a volume of 2.5 to 5 m³. This enables an optimum combination of household and commercial waste disposal with a refuse collection vehicle.

SERIES OPTIONS

BASIC CONSTRUCTION:

- Split lifting comb fully automatic MGB EN 840-1, 2, 3
- Double trunnion receiver for 2.5 to 5 m³ according to DIN 30373
- Positively controlled support for asymmetrical trunnion socket
- Hydraulically folding guide flap
- Lifter-integrated control for pick-up function
- Preparation for RFID systems
- Three-stage speeds
- Infinitely adjustable lid opener
- Mechanical lifting carriage stabilisation
- Emptying pocket containers in accordance with EN 12574
- Axially adjustable fork dimension (1650-1830 mm) to accommodate different pocket containers
